

Europe

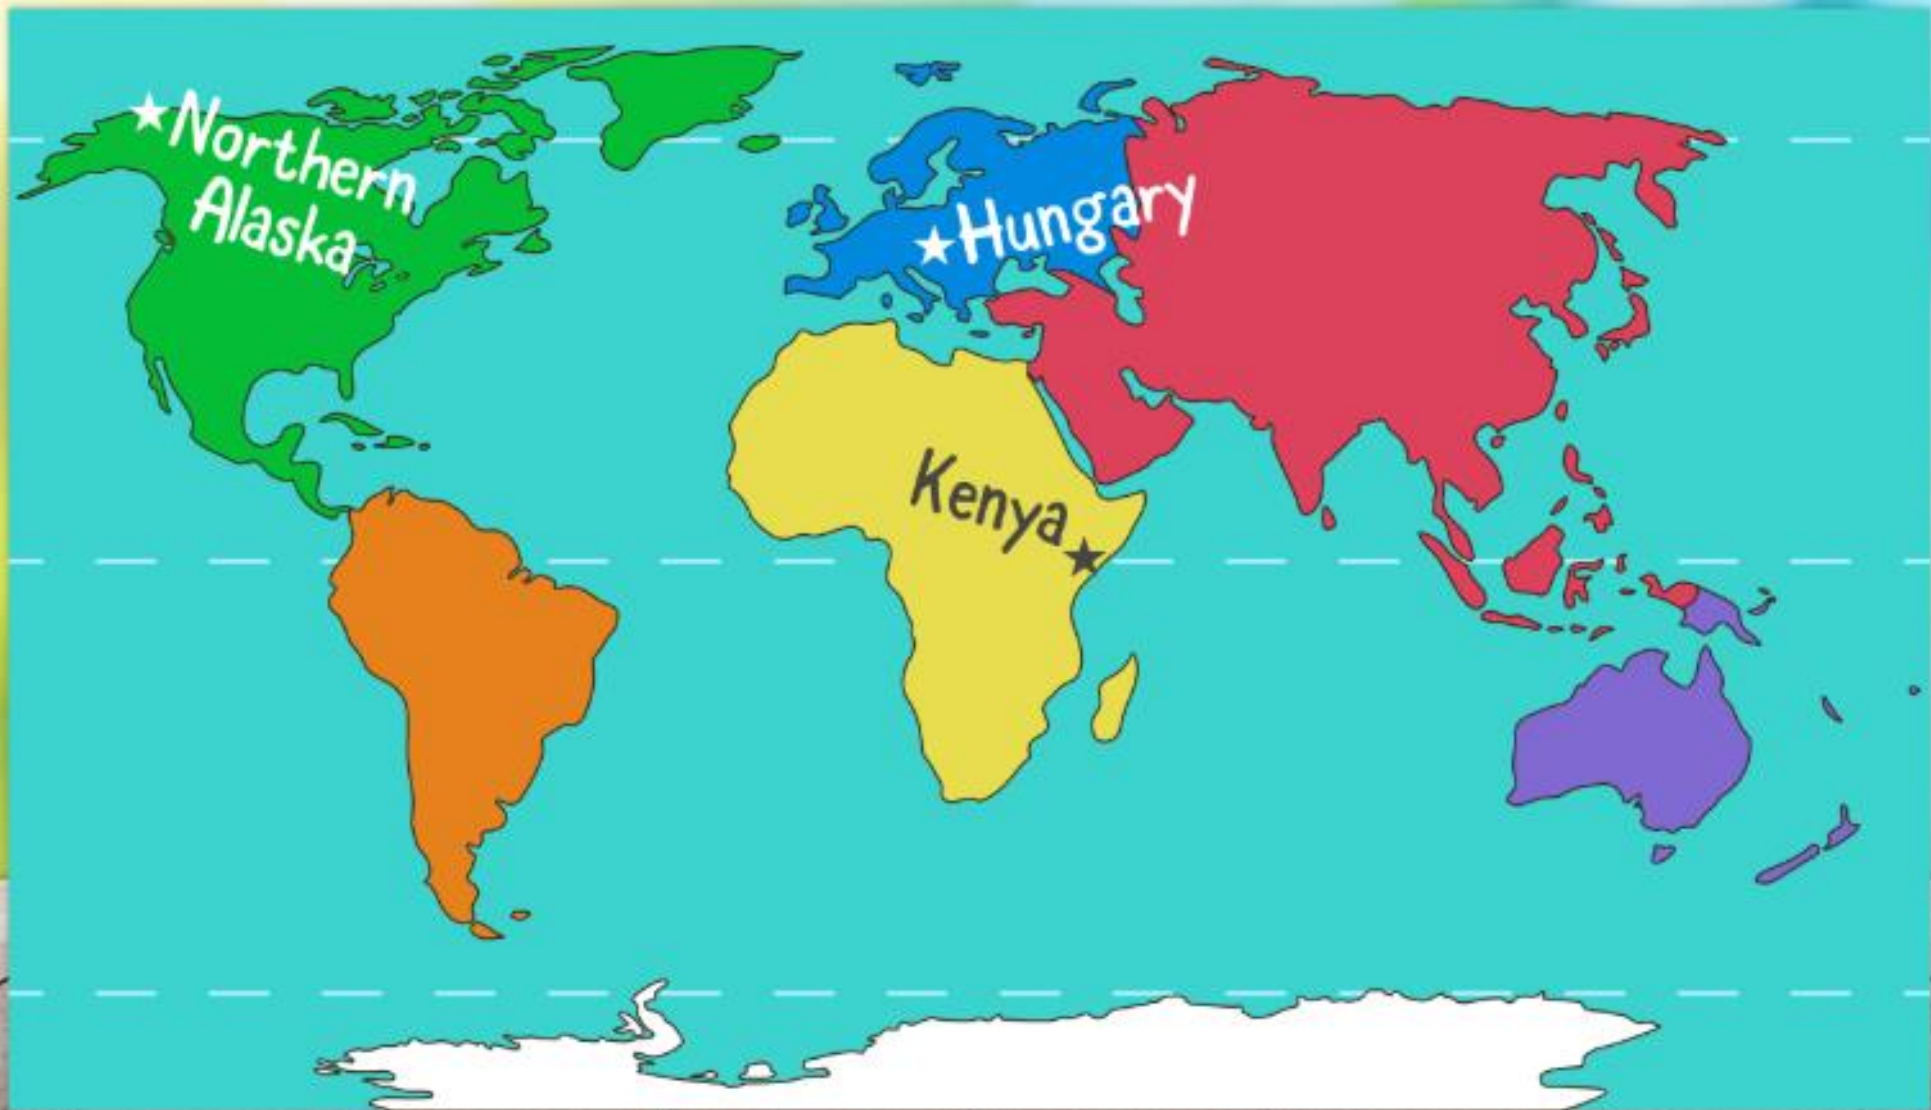

Where
in the world
are we?

Can you see
the United
Kingdom on this
map of Europe?

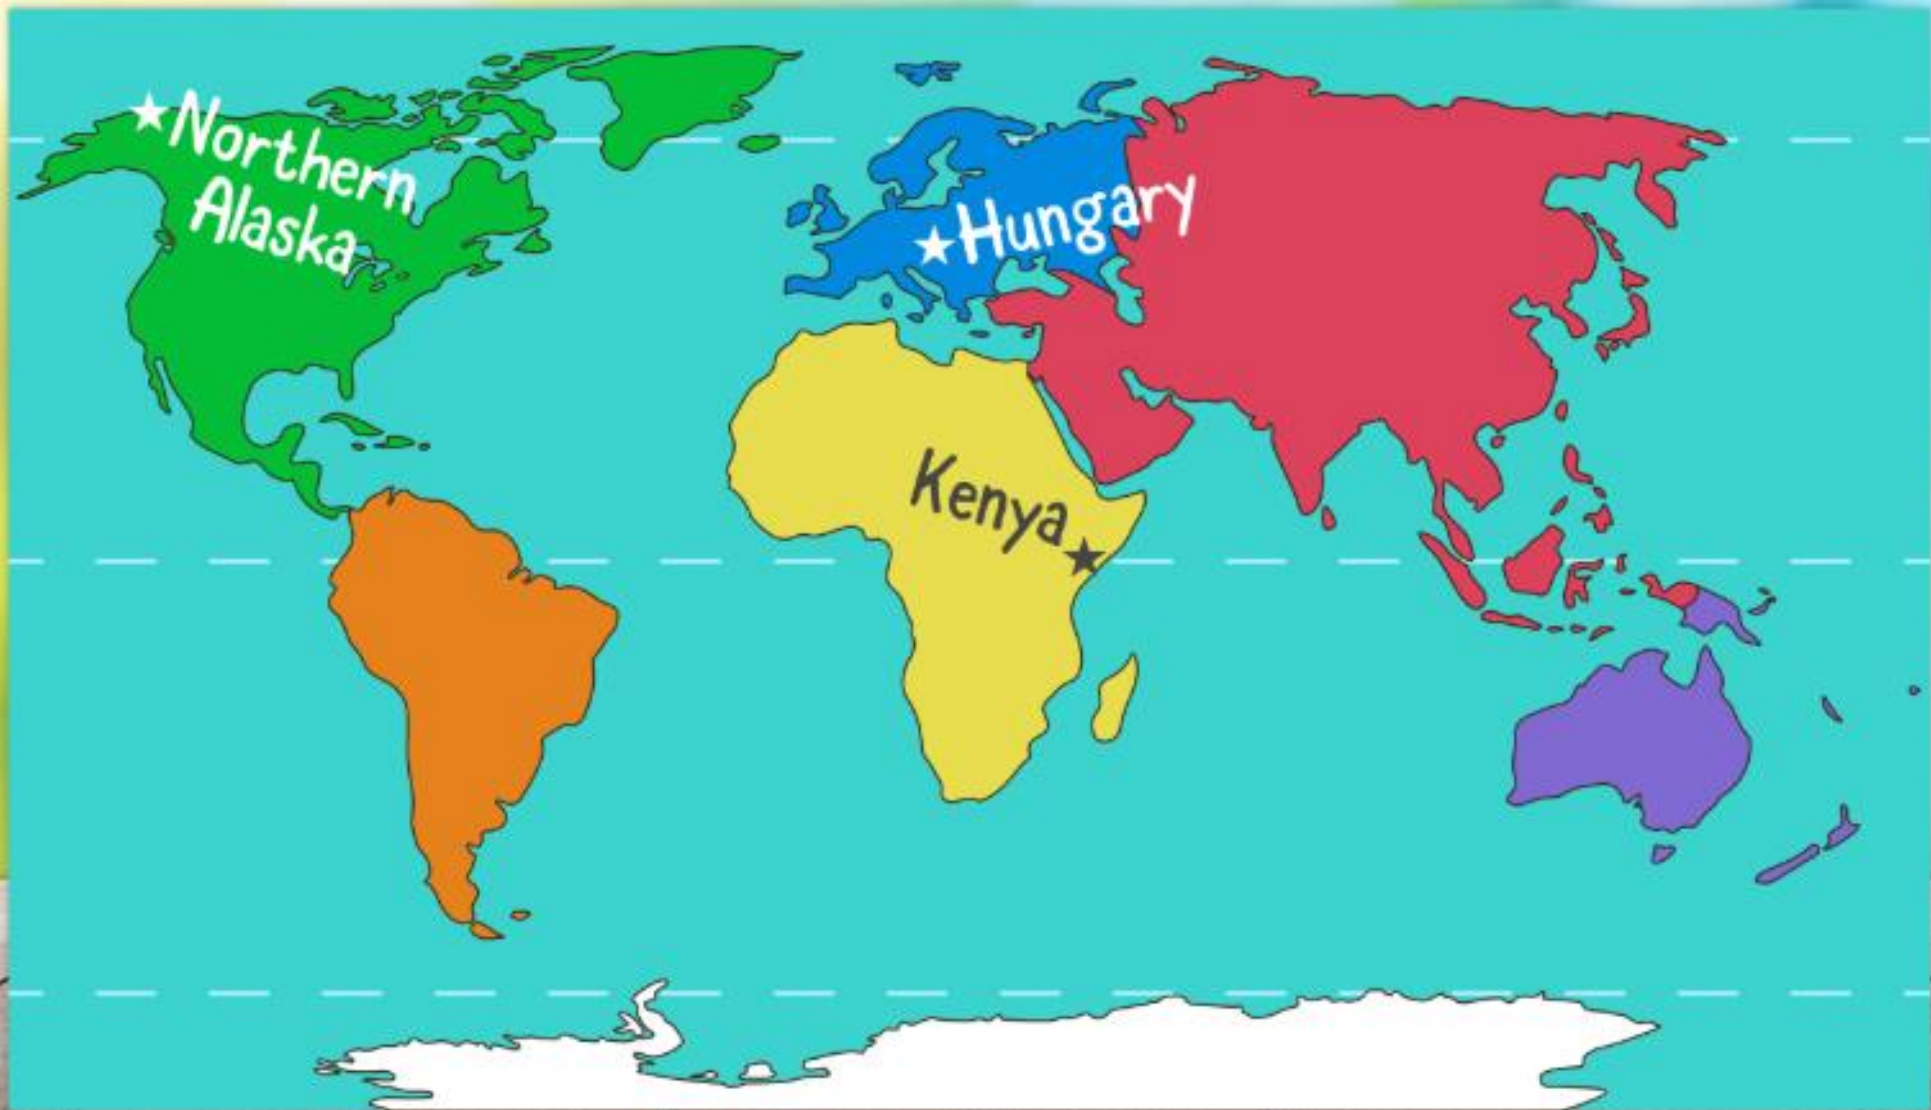

Can you now
find the United
Kingdom on this map
of the world?

Do you think the weather right now in these countries is similar to, or different from, our weather?

Do you think the weather right now in these countries is similar to, or different from, our weather?

Normally,
autumn in the
United
Kingdom is
like this:

cool, sometimes cold

bright, sometimes sunny

often cloudy

often wet and windy

I wonder
what it's like in
other countries...

This is
Hungary in
autumn.

What do
you notice?

This is
Northern
Alaska in
autumn.

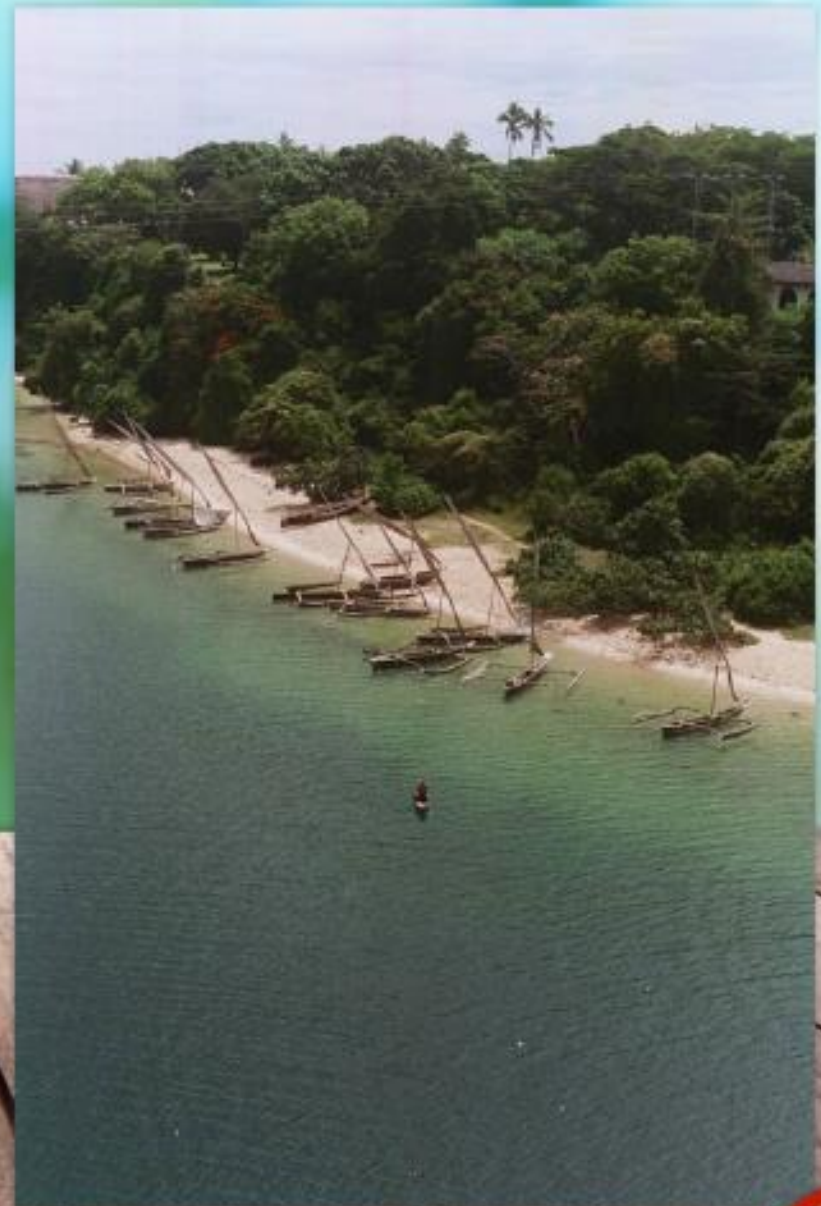

What do
you notice?

This is
Kenya in
autumn.

What do
you notice?

Hungary's autumn weather is very similar to the UK's. It's cool, wet and windy!

Northern Alaska's autumn weather is freezing! It snows often, and it gets dark very early.

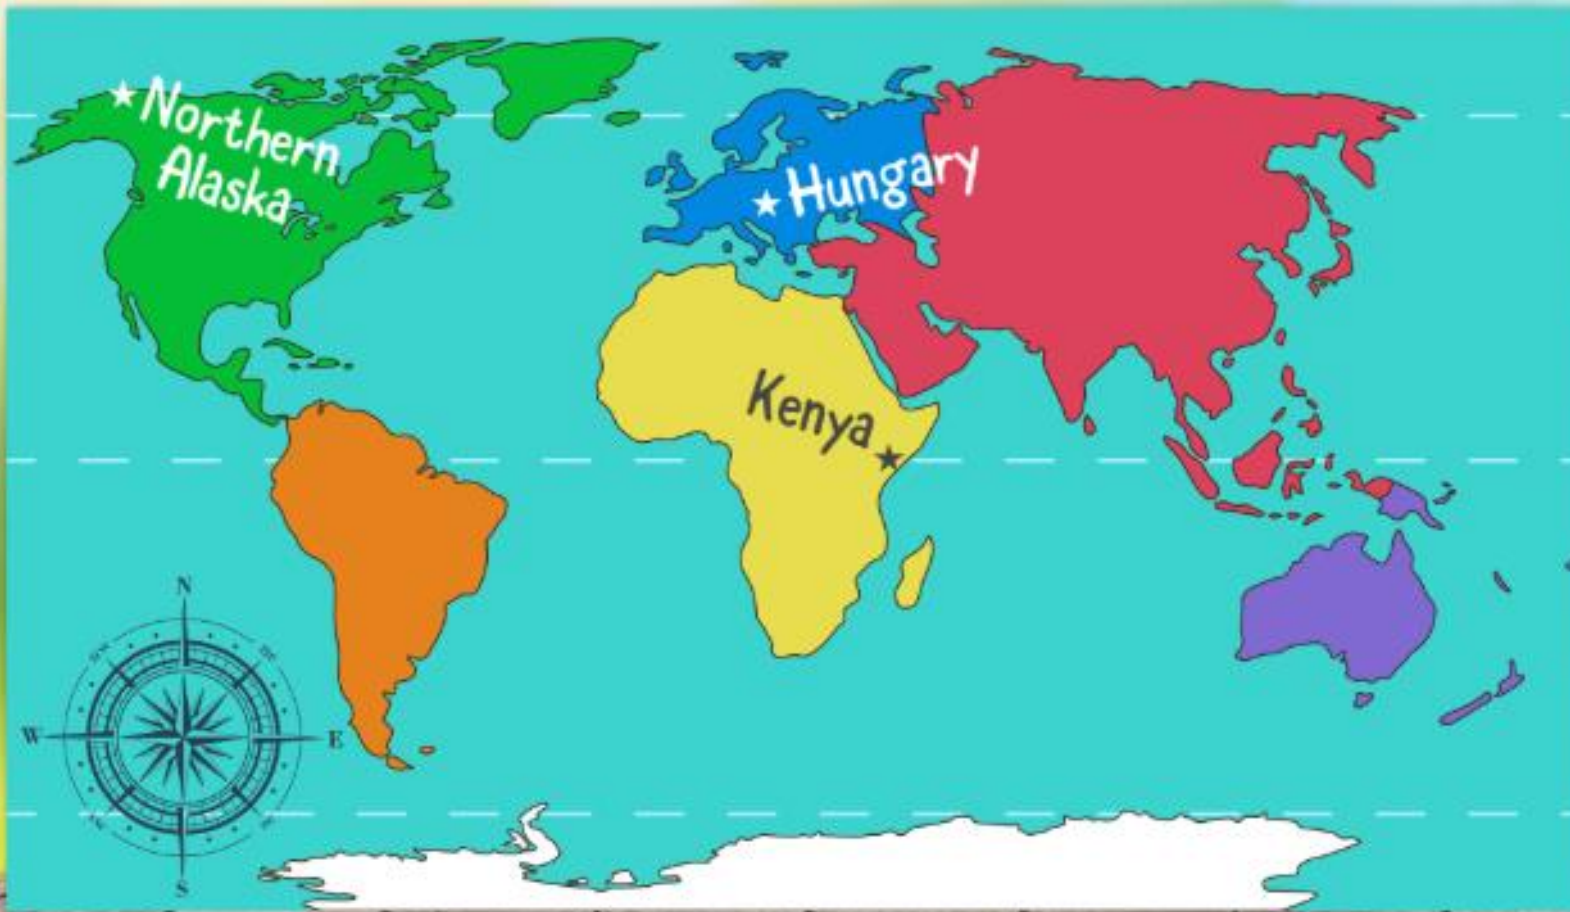

For most of autumn, Kenya is very sunny and dry. It rains heavily in November, filling the lakes and rivers. Even in the rainy season, it's still very hot!

What do you notice about the **location** of these three countries?

Northern Alaska is in the **north**, near the top of the map.

Hungary is further **south**, just like the UK.

Kenya is near the middle of the map.

Countries near the top and bottom of the map have cold weather.
Countries near the middle of the map have hot weather.

North Pole

Equator

South Pole

The equator goes around the middle of the Earth, where it is widest.

Countries near the equator have hot weather all year round.

Countries near the North and South poles have cold weather all year round.
